

next office connect

HOST LOCAL, THINK GLOBAL

Storing your data and systems centrally in a local **next connex** partner facility allows you the security of cloud backup, with the peace of mind and serviceability of being able to touch it. Should a disaster occur your employees can access your systems remotely until your physical facilities are restored.

Office connect allows clients to locate or duplicate their server equipment in a local data centre, with a dedicated point-to-point connection between them. This means they are able to continue operations when a disruptive event occurs.

Disaster recovery by default

Storing your critical systems and data in the local data exchange allows you to work from anywhere to ensure continuity of service to your clients.

Connect with the cloud

Quicker, smarter integration with hosted services in the local data exchange.

Unlock remote working

Access your data anytime, anywhere.

Automatic back-up

Working from a central system means that your data is out of harms way.

Scalable

Add multiple sites or backup as required. We can quickly adapt your solution to meet your changing requirements.

Burstable

A data speed overdraft that you can use when your business needs it.

Secure

Network and facilities with the highest levels of security.

With the rackspace connected to the **next connex** core network, Internet access is delivered by triple-node Next IP Transit, with all additional services automatically available to be activated when a client requires them.
