

next cloud connex

CONNECT DIRECTLY WITH PUBLIC CLOUD SERVICES

next connex has direct connections with Amazon AWS, Microsoft Azure, Google Cloud and Soft-layer offering a more secure and reliable public cloud networking experience. Direct connection to these public cloud services allows clients to add the benefits of flexible cloud storage and compute more securely and reliably to their wider information strategy.

Customers want a more secure and reliable cloud networking experience than access over the public internet can provide. Accessing public cloud services over the public internet can be unreliable, and incurs data throughput charges.

CONNECT DIRECTLY WITH PUBLIC CLOUD SERVICES

-  **Connect direct**
Connect to our network at any POP to access public cloud services directly.
-  **Access more securely**
Traffic is sent securely over the **next connex** secure core network, not the public internet.
-  **A more robust service**
Direct connection for guaranteed quality of service.
-  **More stable than IP Access**
Point-to-point connections for reliable low latencies.
-  **No data transfer charges**
Cloud providers charge per MegaByte for access to their services via the internet. We do not.
-  **Diverse node connectivity available**
You can connect separately to cloud service nodes.
-  **Scalable**
High performance compute and storage can scale up or down based on your demand.
-  **Flexible**
Create a virtual environment with the operating system, programming language, web application platform, database and other services you need.

Direct connection offers clients low, reliable latencies, improved security, increased reliability, and higher throughput with no data throughput charges.
